1 Welcome

Scripture is a console for Bible verses: find one by reference or by its words, and put it on a projector, a second screen or your live stream — full screen or as a lower third. It can listen to the preacher and bring up each verse as it's read, and its **Sermon Notes** turn the sermon into a summary, an outline and, in time, a book.

What you need

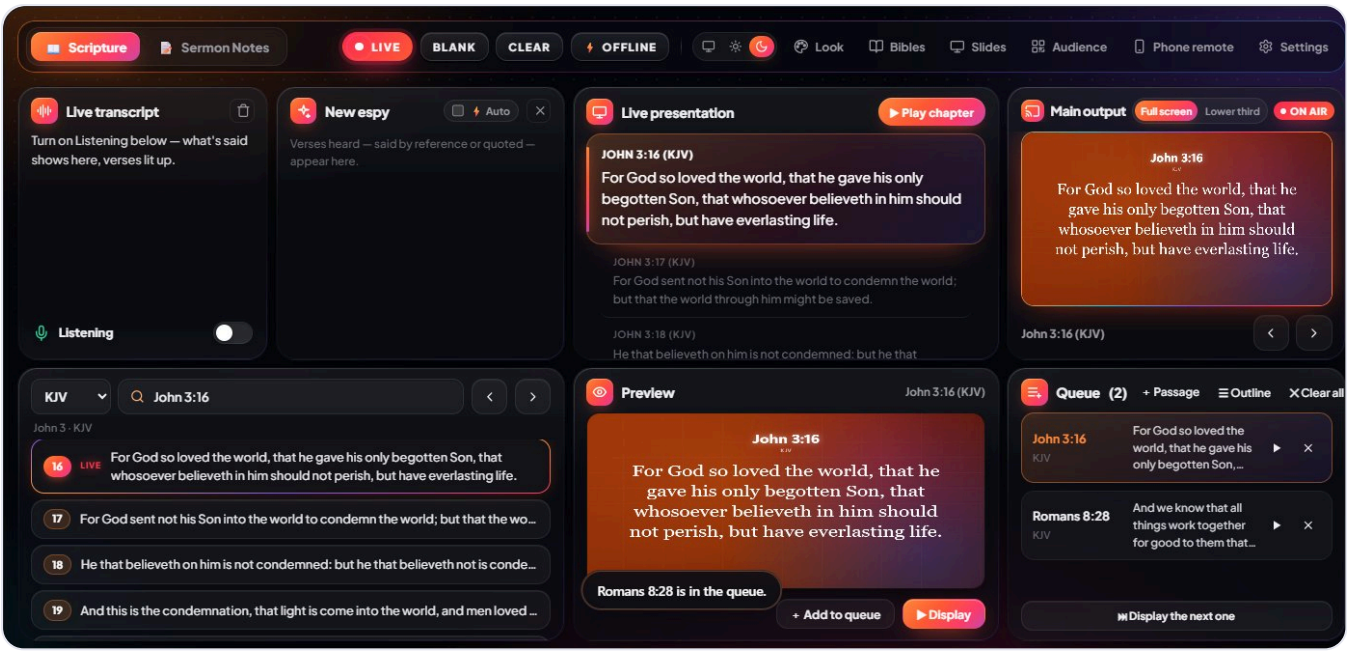

- **A computer with Chrome or Microsoft Edge.** Listening with the browser is free and works best there.
- **A second screen or projector** if you show verses in the room, and a microphone (or a sound feed into the computer) for listening.

The plans

Scripture is its own subscription, apart from a studio plan. **Free** covers presenting; **Pro** can be tried free for 7 days. See and change your plan from the line under the console.

	Free	Pro	Business	Apex
Find and present verses, the queue, Looks, songs and slides, the output window, the streaming-software link	✓	✓	✓	✓
The confidence monitor, working offline	✓	✓	✓	✓
Listening with Chrome	✓	✓	✓	✓
AnnanAI listening	—	✓	✓	✓
Sermon Notes: summary, statements, Ask AnnanAI, outline, Live notes, quote cards, saving sermons	—	✓	✓	✓
The audience page	—	Scripture	Scripture, transcript, prayer requests	Scripture, transcript, prayer requests
The public sermon library	—	✓	✓	✓
Phone remotes	—	1	up to 3	up to 3
Importing past sermons	—	—	40 hours a month	60 hours a month
Book chapters and whole books	—	—	✓	✓

2 A tour of the console

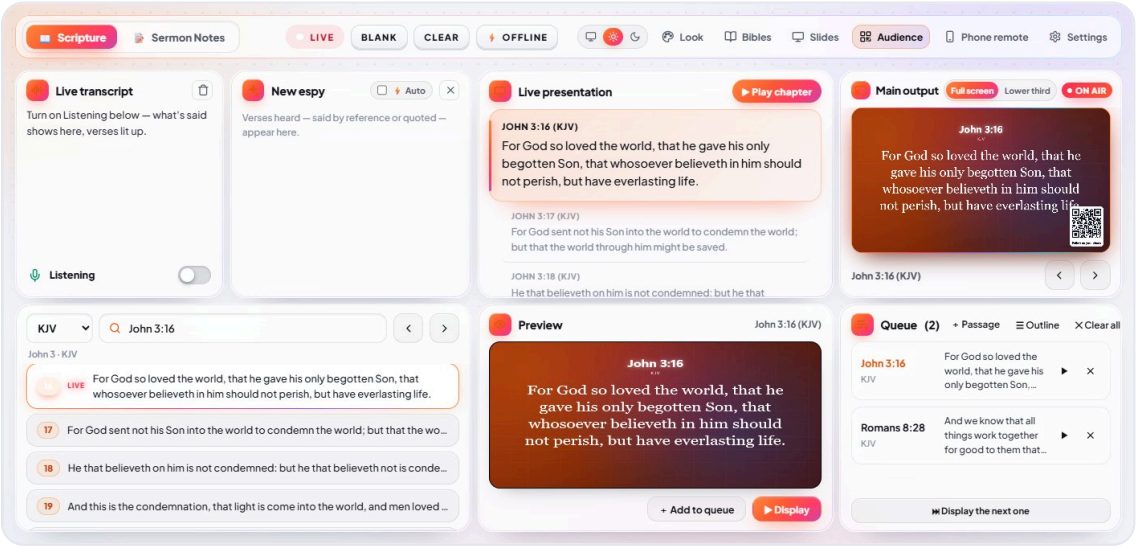

The console, with John 3:16 on the main output.

The top bar

- **Scripture | Sermon Notes** — the two tabs.
- **LIVE** lights up while a verse is on screen; **BLANK** blanks the screen; **CLEAR** takes the verse off.
- 🖥 ☀ ☾ — System, Light or Dark.
- **Look**, **Bibles**, **Slides**, **Audience**, **Phone remote** and ⚙ **Settings**.

The cards

- **Live transcript** and **New espy** — listening, and the verses it hears.
- **Main output** — what's on screen now.
- **Find a verse** — search, and the chapter's verses.
- **Preview** — check a verse before it goes up.
- **Queue** — the day's verses in order.
- **Live presentation** — the verse up, the next ones, and related verses.

The same console in Light mode.

3 Finding and showing verses

1. In **Find a verse**, type a reference — `John 3:16`, `Ps 23`, `1 Cor 13:4-7` — or some of its words, and press `Enter`.
2. The chapter's verses are listed by number. **Click** one to see it in **Preview**; **Shift-click** to pick several.
3. Press **Display** — or double-click the verse — and it goes on the **Main output**. With **A verse I type goes straight on screen** (Settings), Enter puts it up at once.
4. Step through with ◀ ▶ on the output, or `←` `→`.

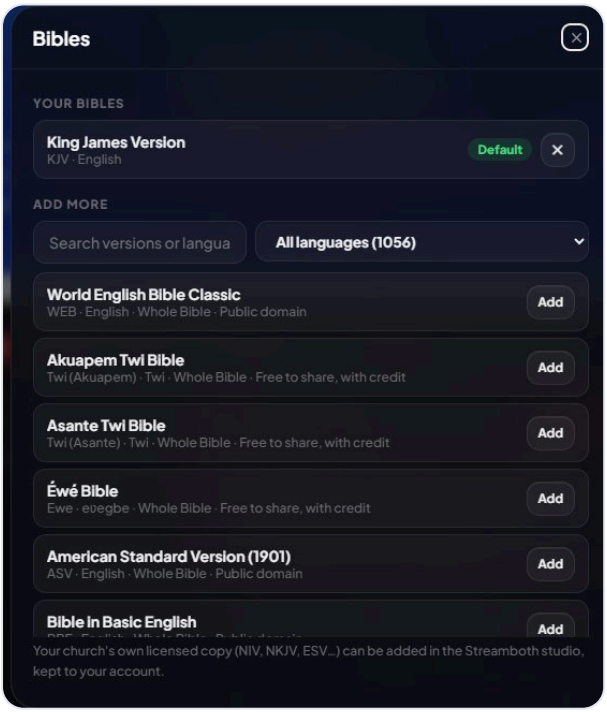

On the output

- **Full screen | Lower third** switches how the verse shows.
- ⛶ or `F` fills the screen. For a projector, drag the window to that screen first — or use the output window (chapter 10).
- **BLANK** (or `B`) blanks the screen while you get ready; **CLEAR** (or `Esc`) takes the verse off.

Live presentation

Shows the verse on screen and the next ones, ready to go up with a click — and **related verses** that share its words. ▶ **Play chapter** puts the chapter up verse by verse from the one on screen: every few seconds, or read aloud with 🔊, with ⏸ to pause and ⏮ ⏭ to step.

4 Your Bibles

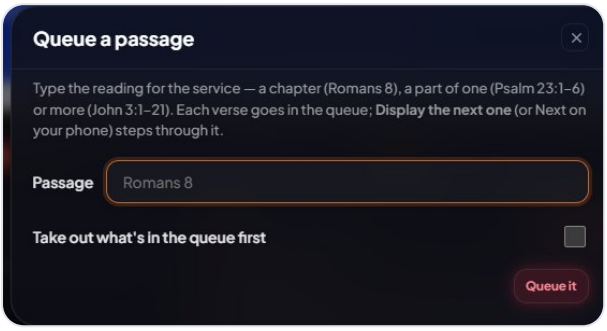

Bibles in the top bar lists your versions and over a thousand more to add — English, Twi, Ewe and hundreds of other languages. Search by name or language, press **Add**, and make one your **Default**.

The version used for searching is set in Settings (**Bible to search**), and a **Second version** can show under or beside the first.

> **Licensed versions.** Your church's own licensed copy (NIV, NKJV, ESV…) can be added in the Streamboth studio, kept with your account.

5 The queue and passages

Get the day's verses ready before the service: find each one and add it to the **Queue**. During the service, **Display the next one** puts them up in order.

+ Passage

Queues a whole reading — Romans 8, say, or Psalm 23 — verse by verse, adding to the queue or replacing it.

☰ Outline

Turns the queue into a sermon outline to copy, download or print.

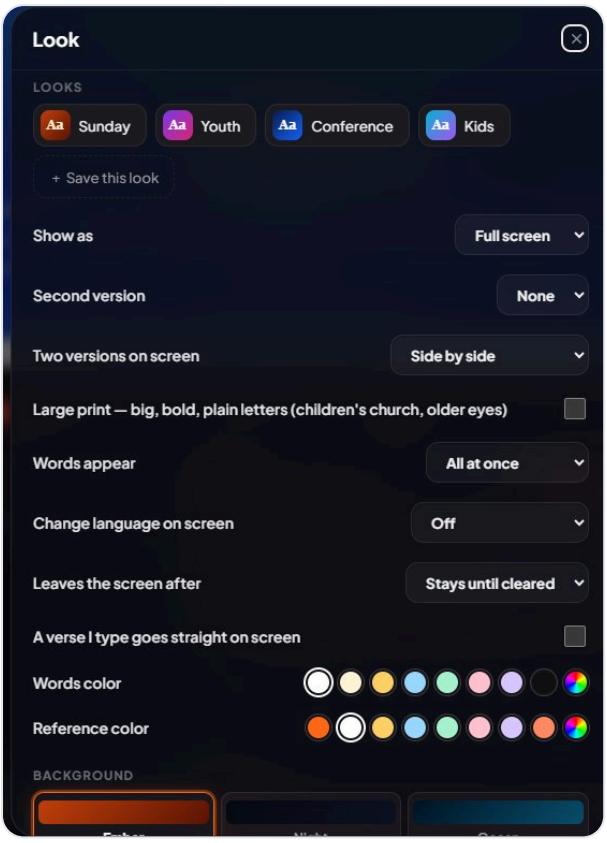

6 Listening for verses

Turn on the **Listening** switch and Scripture writes a **Live transcript** of what's said, and lists the verses said or quoted under **New espy** — ready to present with a click.

- **Auto** — verses said aloud go straight on screen.
- After a chapter, **numbers alone** are enough: say "John 3:16", then "17", "18". Another chapter of the same book needs no book name: "chapter 5 verse 8", "chapter 9:16".
- **Listen with** (Settings): **Chrome** — free, on this computer — or **AnnanAI** Pro+, which is more accurate and works in any browser.
- **Listen for** (Settings): the English accent to listen for — Ghana, Nigeria, Kenya, South Africa, the UK, the US and more.

> **Tip.** Feed the sound desk into the computer (or put the microphone near a speaker) so it hears the preacher clearly. The transcript feeds Sermon Notes too.

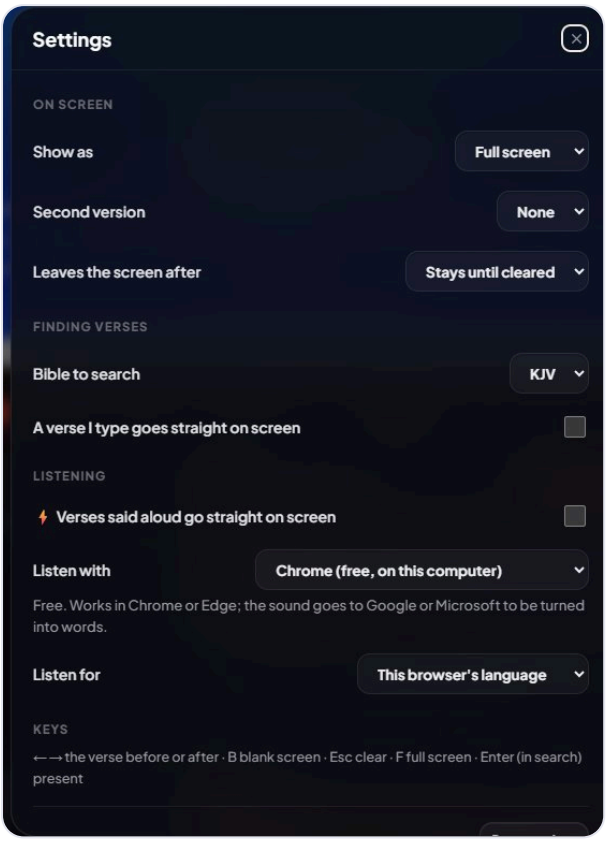

7 How it looks

Look in the top bar sets how verses appear:

- **Looks** — Sunday, Youth, Conference and your own, saved to use again.
- **Text and reference colours**, and **backgrounds**: ready-made ones, your own two colours, and gentle motion with its speed.
- How the words **come in** — all at once, word by word, or rising.
- **Two versions** side by side or one above the other, and **changing the language** on screen every few seconds.
- **Large print**, and the **Kids** look, make everything big and plain.

8 Settings

On screen

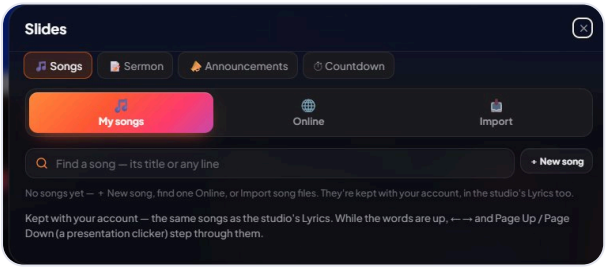

- **Show as** full screen or lower third.
- The lower third's **place** (bottom, middle, top), **size**, **width** and **style** — Classic, News, Minimal or Glass.
- **Your church's colour** and **your logo** on the lower third.
- **Behind the lower third**: black, or green for keying in other software.
- A **second version**, and how long a verse **stays** before it leaves the screen.

Finding and listening

- The **Bible to search**, and whether a verse you type goes straight up.
- Whether verses said aloud go straight up, what to **listen with**, and the accent to **listen for**.

Reset settings puts everything back.

9 Songs and slides

Slides puts more than verses on the same screen:

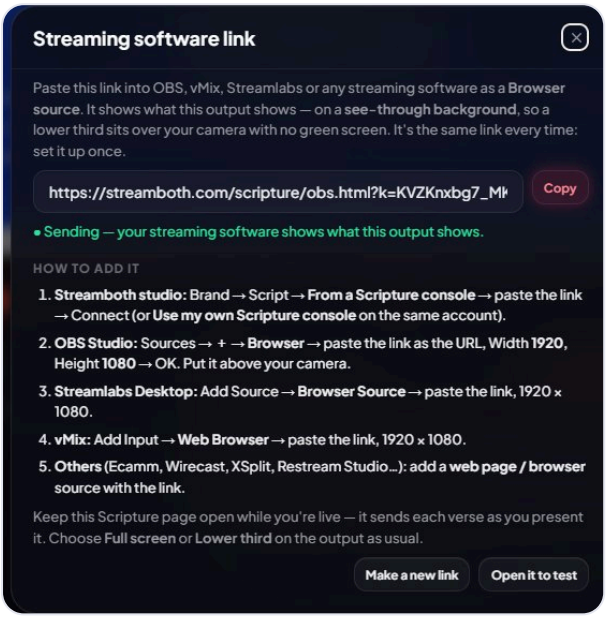

- **Songs** — each verse of a song is a slide. Write your own, find one online, or import; they're kept with your account (the same songs as the studio's Lyrics).
- **Sermon** slides made from your notes: `#` for a point, `-` for what's under it, and a verse on its own line.
- **Announcements** that loop by themselves.
- A **Countdown** to the start, with a verse under it.

◀ ▶ step through the slides.

10 Projectors and streaming software

The output window

The **output window** button, beside ⛶ on the Main output, opens the output in a window of its own. Drag it to the projector and make it full screen; the console stays on your screen.

In OBS, vMix or Streamlabs

The **streaming software link** button gives a link to add as a **Browser source** (1920 × 1080). It shows the output on a see-through background, so a lower third sits over your camera.

In the Streamboth studio

Paste the link in **Brand → Script → From a Scripture console** (or press **Use my own Scripture console**), and what the console presents goes on your stream — so someone else can run the verses from another computer.

11 The confidence monitor and offline

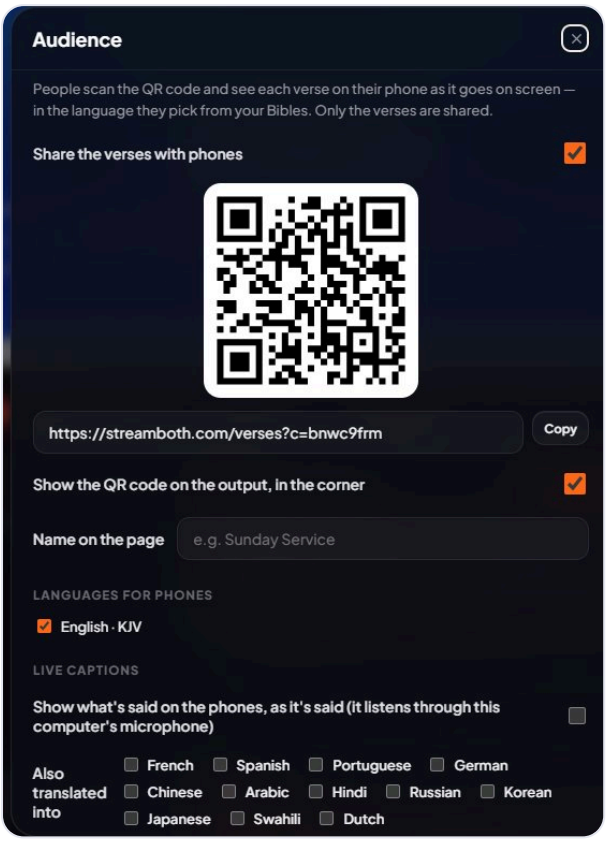

Confidence monitor

A screen for the preacher — a TV by the pulpit, a laptop, a tablet. Press the monitor button beside the output window button: **Open it in a window here** (drag it to that screen and double-click for full screen), or open its link on any other screen. It shows the verse on screen now, the **next** one (the next in the queue, or the verse after), the **time**, the **service clock** (press **Start now** when the service begins) and your **notes for the preacher**, one point a line. It shows **SCREEN BLANK** when you blank the screen.

Keeps working offline

Press ⚡ **OFFLINE** in the top bar, then **Get ready for offline** before the service. The console, the output window, your Bibles, today's queue and your songs are kept on the computer, so if the church internet drops the top bar says **OFFLINE — STILL PRESENTING** and you carry on — even if the page is reloaded. Listening, Sermon Notes, the audience page, the phone remote and the streaming-software link wait for the internet to come back.

12 The audience page Pro+

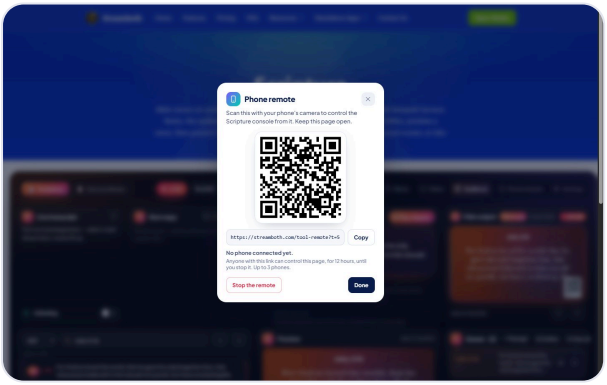

Switch on **Share the verses with phones** and people scan the QR code (it can show in a corner of the output too) to follow each verse on their phones as it goes up — in the language they pick from your Bibles. They can save verses they like with ♡ and email them to themselves.

Give the page a **name** (e.g. Sunday Service) and choose the **languages for phones**.

Business+ Phones get a **Scripture | Transcript** switch: with **Live captions** on, the transcript shows what's said as it's said, translated into the languages you choose. People can also send you a **prayer request** that only you see.

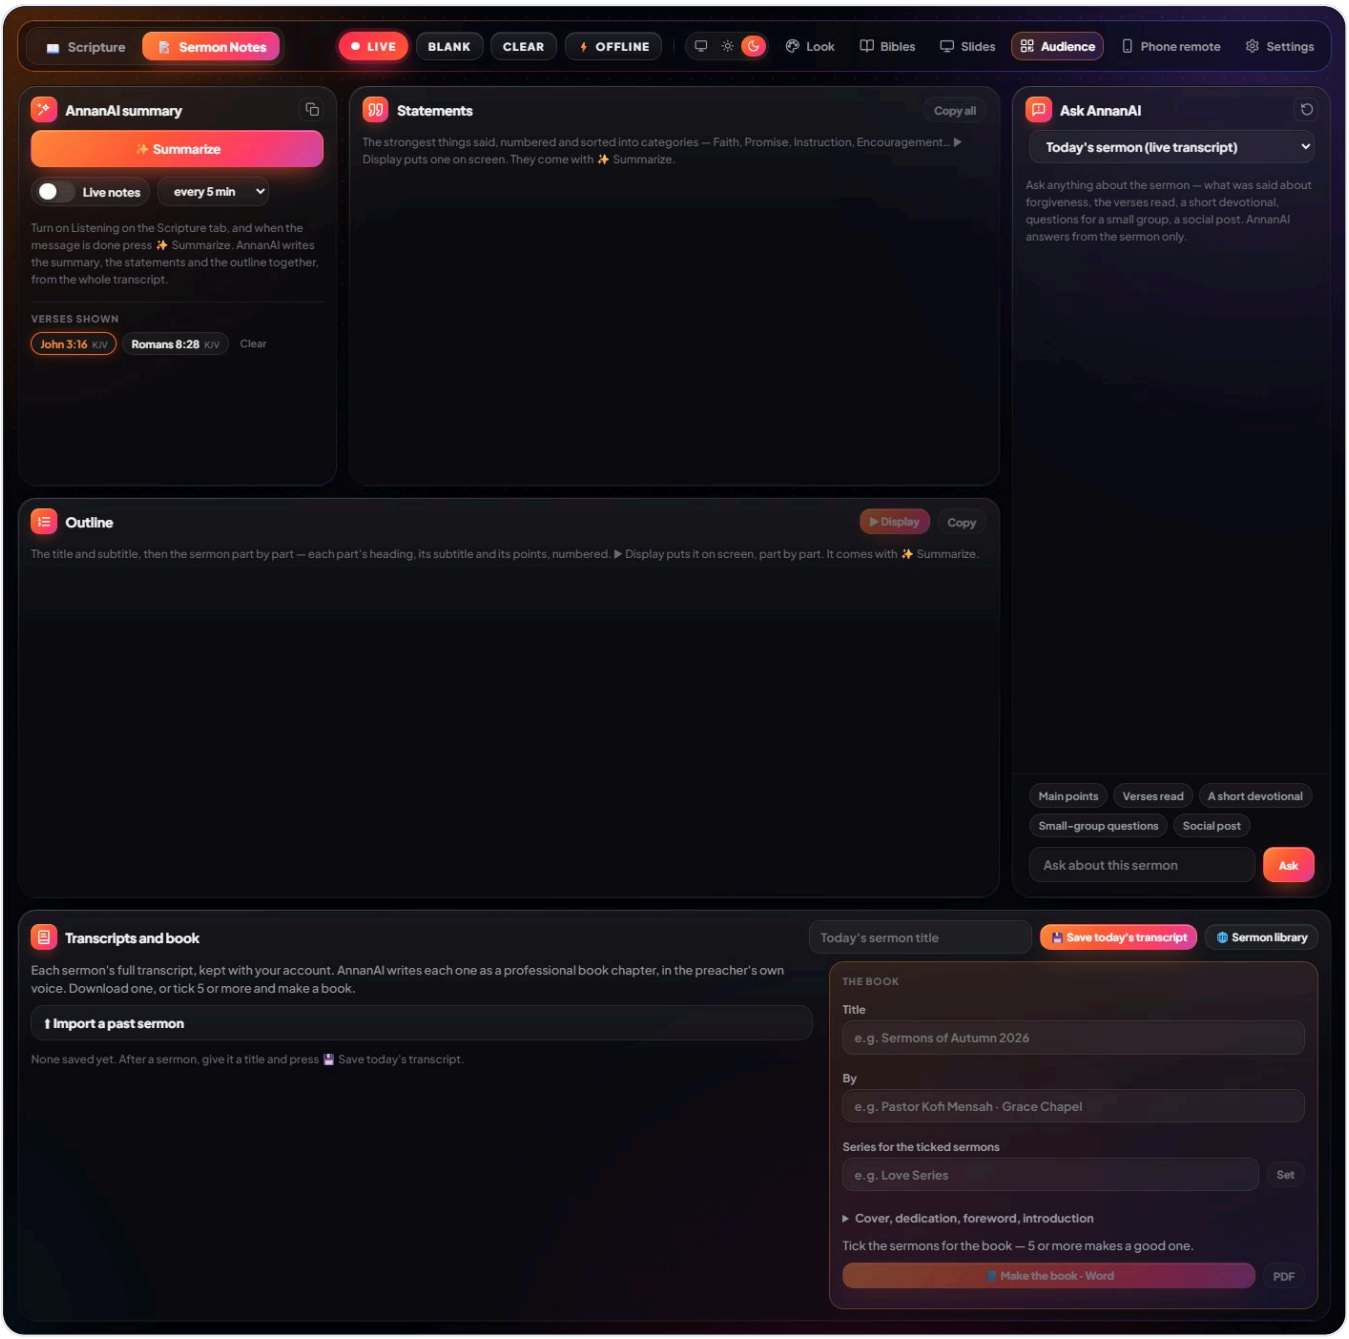

13 The phone remote Pro+

1. Press **Phone remote** in the top bar.
2. Scan the QR code with your phone.
3. Run the console from your phone, with a **Scripture | Statements | Sermon notes** switch: step through verses, put a statement on screen with a tap, read the summary, switch Live notes on, and put the outline — or one part of it — on screen.

Pro has one phone remote; Business and Apex up to three. The link lasts 12 hours, until you press **Stop the remote**; keep the console open on the computer.

14 Sermon Notes Pro+

The Sermon Notes tab.

The **Sermon Notes** tab, beside Scripture, turns the live transcript into notes — written by AnnanAI from what was said.

- **AnnanAI summary** — ✨ **Summarize** writes a title, a summary and the key points, and fills the cards below. "Verses shown" lists every verse put up. With **Live notes** on, it all rebuilds every 3, 5 or 10 minutes while Listening is on.
- **Statements** — the strongest things said, numbered and grouped (Faith, Promise, Instruction, Encouragement…). ▶ **Display** puts one on screen; tick a few and ↻ **Rotate on screen** sends them round every 8, 12 or 20 seconds. The picture button makes a **quote card** — square or story, in your church's colour or over your own picture, with your logo — to download or share.

- **Ask AnnanAI** — ask about today's sermon or a saved one: what was said about a subject, the verses read, a short devotional, small-group questions, a social post. **Copy** an answer, or ▶ **Display** it.
- **Outline** — the title, then the sermon part by part with headings and points. ▶ **Display** shows it as slides; each part has its own.

Transcripts and books

- 💾 **Save today's transcript** keeps the whole sermon with your account. Put sermons in a **series**.
- Business+ ⬆ **Import a past sermon**: drop in an audio or video file (up to 2 GB) or paste a direct link (Dropbox, OneDrive, your website — not YouTube or Facebook). AnnanAI transcribes it and saves it with its title, date and series. The panel shows the import hours left this month.
- 🌐 **Sermon library**: a public page for your church — streamboth.com/sermons/your-church — with the sermons you tick 🌐. Set its name and web address once; each sermon ticked shows its title, date and series, AnnanAI's summary, key points and outline (written once, when you first tick it), the verses read and the whole transcript. People can search, filter by series and share. Untick 🌐 to take a sermon off.
- Business+ Each sermon becomes a **book chapter** in the preacher's own voice, in the first person — as Word or PDF. Tick several (five or more makes a good one) to make a **book**: cover, title page, copyright, dedication, contents, foreword, an introduction AnnanAI writes, then Chapter One, Chapter Two… with page numbers.

15 Keyboard shortcuts

When you're not typing in a box:

Key	What it does
← → · PgUp PgDn	The verse before / after
B	Blank the screen (and back)
Esc	Clear the verse
F	Full screen
Enter (in the search)	Present the verse

16 Your data and your privacy

- **Listening with Chrome** uses the browser's speech recognition. **AnnanAI listening** sends the sound to Streamboth's server to be transcribed while it's on.
- **Sermon Notes** — summaries, statements, outlines, answers, chapters — are written by AnnanAI on Streamboth's server from the transcript. Quote cards are made on your computer.
- **Saved transcripts, imported sermons and songs** are kept with your account until you delete them.
- Your **sermon library** shows only the sermons you tick 🌐 — anyone with its link can read them.
- The **offline** copy is kept in your browser on that computer.

- The **audience page** shares only the verses (and, if you switch it on, the transcript). Prayer requests go only to you.

See streamboth.com/privacy for the full details.

17 Troubleshooting

Listening doesn't hear anything

- Allow the microphone when the browser asks, and check the right microphone is picked in your computer's sound settings.
- With Chrome listening, use Chrome or Edge; AnnanAI works in any browser.

The verse isn't on the projector

Open the **output window**, drag it to the projector, and make it full screen there. Check BLANK isn't on.

OBS shows a box, not a see-through one

Use the **streaming software link** (not the output window) and add it as a **Browser source** at 1920 × 1080 — that page has a see-through background.

A feature shows a lock

It's on a higher plan — the lock says which. See the plans from the line under the console.

A sermon link won't import

Use a direct link to the file (Dropbox, OneDrive, your website). YouTube and Facebook pages can't be imported — download the video and drop the file in instead.

18 Getting help

- **Questions and answers:** streamboth.com/faq
- **Contact us:** streamboth.com/contact
- **Email:** streambothlive@gmail.com
- **WhatsApp:** use the chat button on streamboth.com

> **Thank you for choosing Streamboth.** May the Word go out clearly.
